Travel Planner - Overview

Objective:

Solution to a common problem- “Forgetfulness”

Organizer to help manage our life.

A Check list- easy to use and for people of all age.

Present Scenario:

Development in progress.

Long To Do list.

The Problem:

- I am planning a trip to Hawaii.
- I am making notes of all the things which I need to carry with me.
- I have placed that note in my home.
- But just now I remember I need to take my sunglasses with me.
- Unfortunately that list is at home☹.

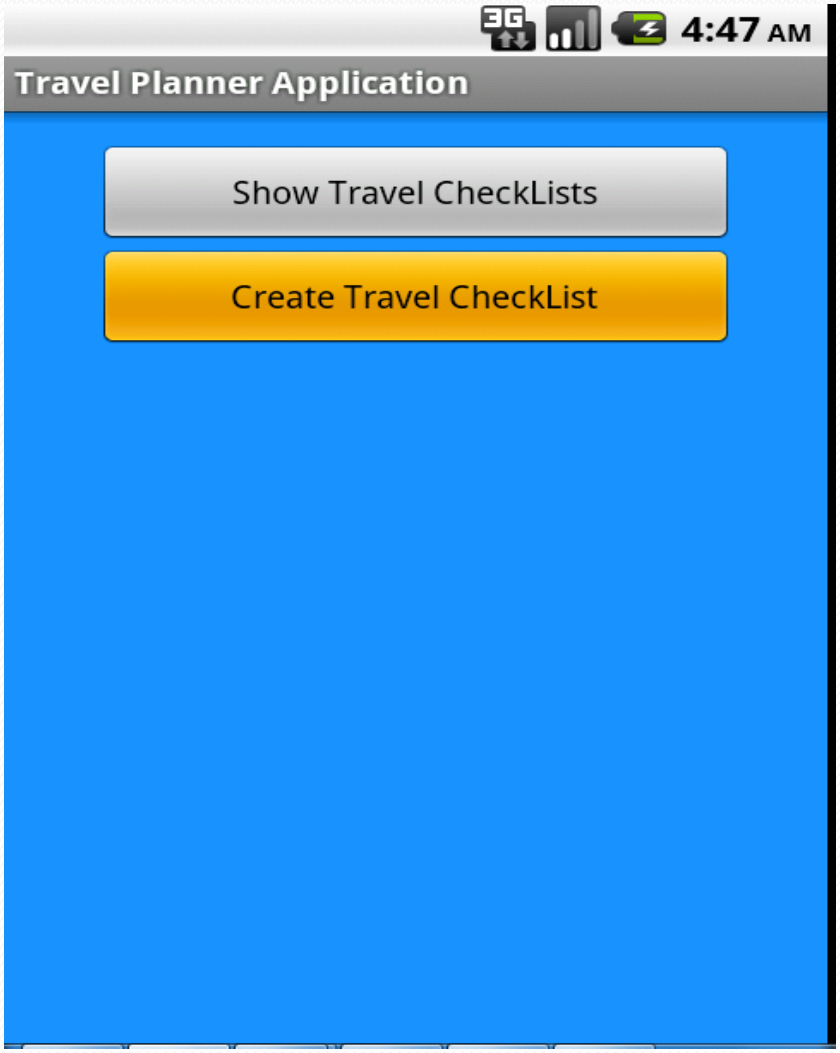
- We go to Grocery stores and we see many people carrying a long list of things they need to buy.
- They also need to carry a pen so that they can delete the items they have already found.
- We always try to do that.
- The problem is, who will remind us to carry that list with us while going for grocery. But we never forget our cell phones.

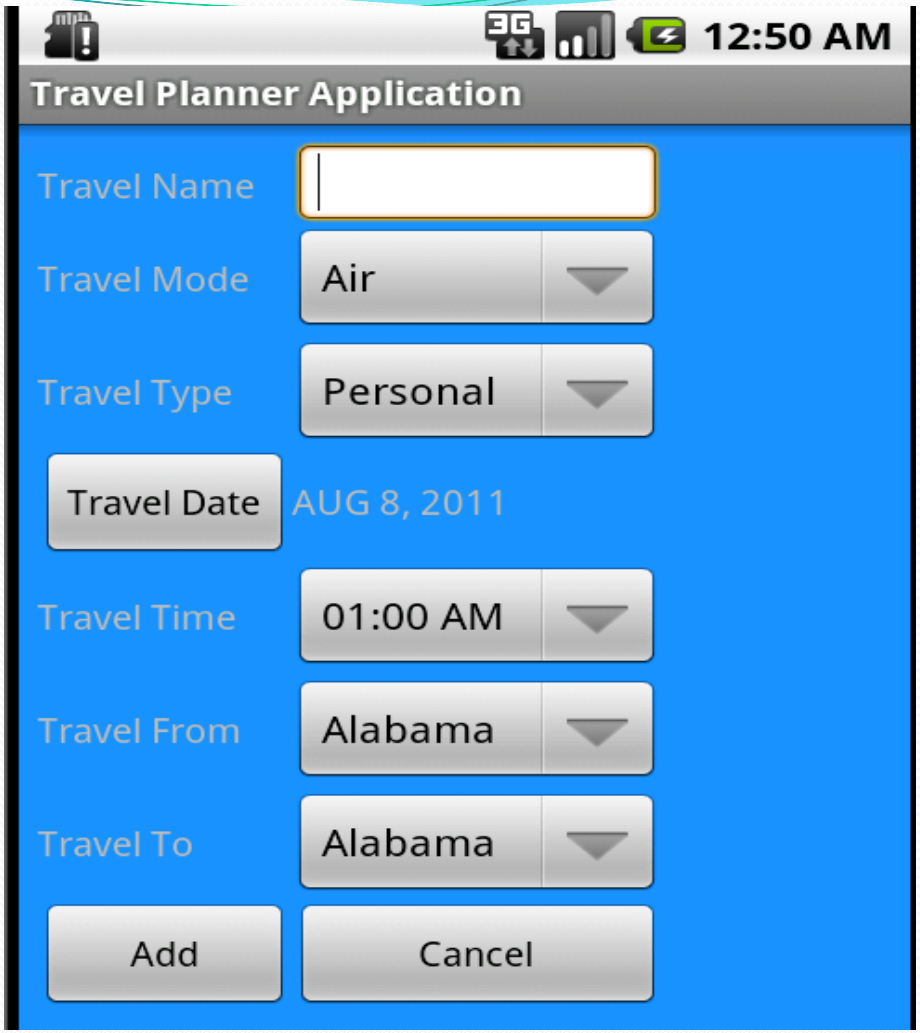
Solution:

An Android application that has a checklist of items that we need to buy or take with us when we are going anywhere.

If we enter the details once, next time we go to the same place we already have a list that can help us plan a better trip.

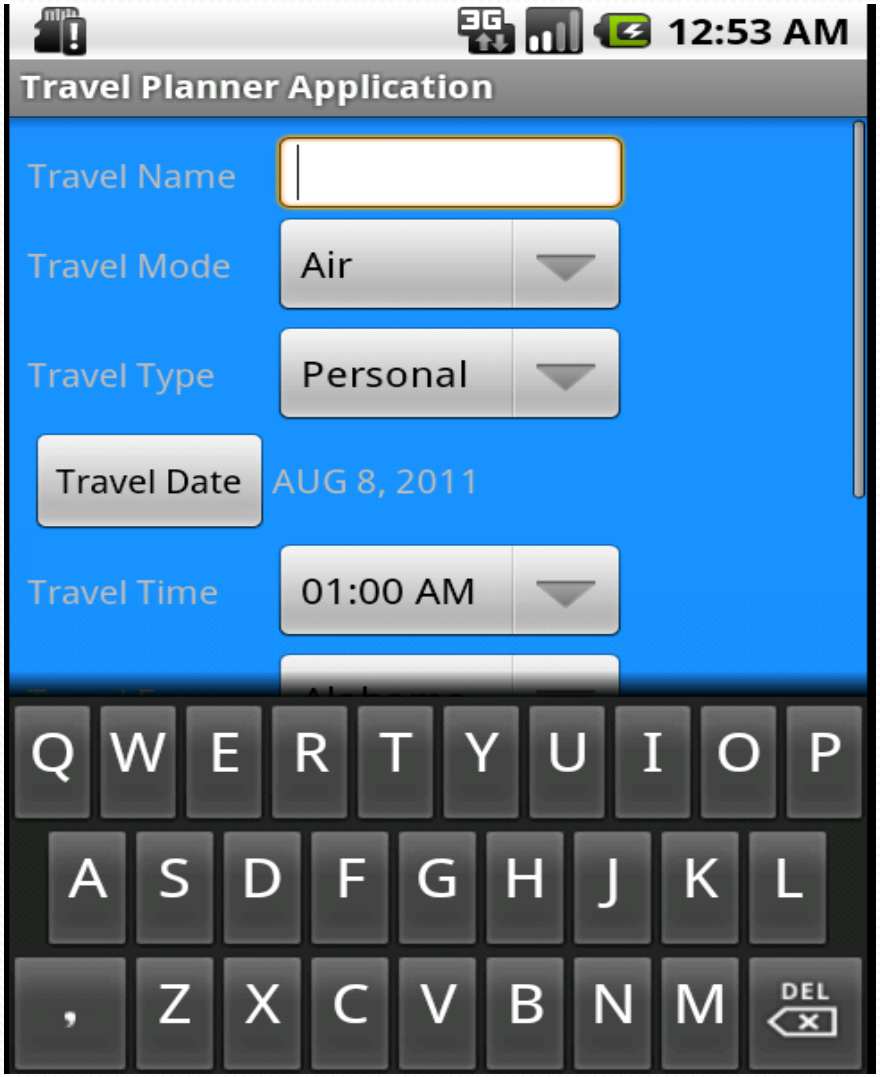
Main Screen

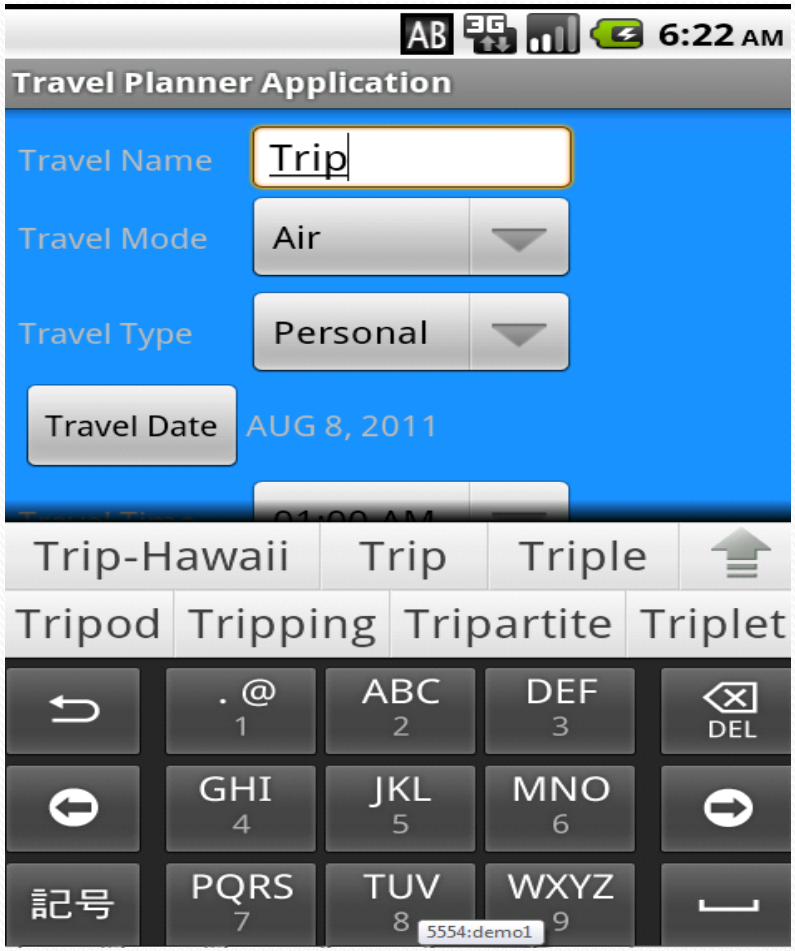




After Clicking on “Create Travel Checklist”

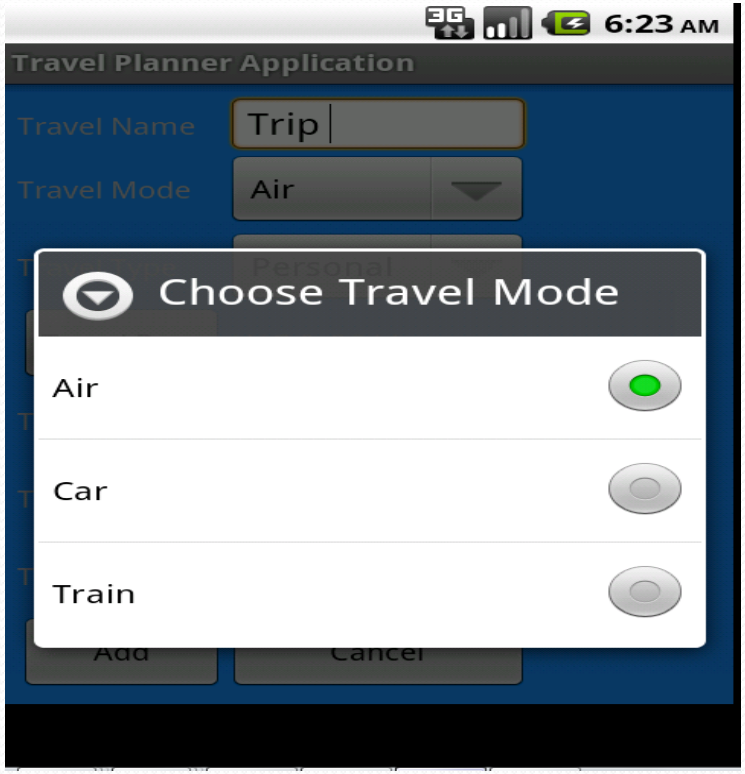
Prompt Keyboard



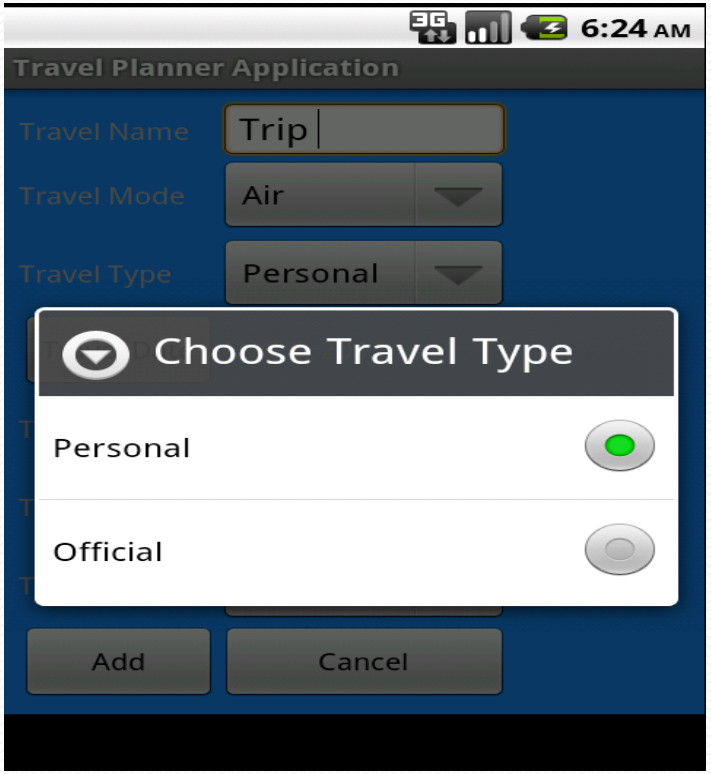


Gives Suggestion based on History and Dictionary

Options Available

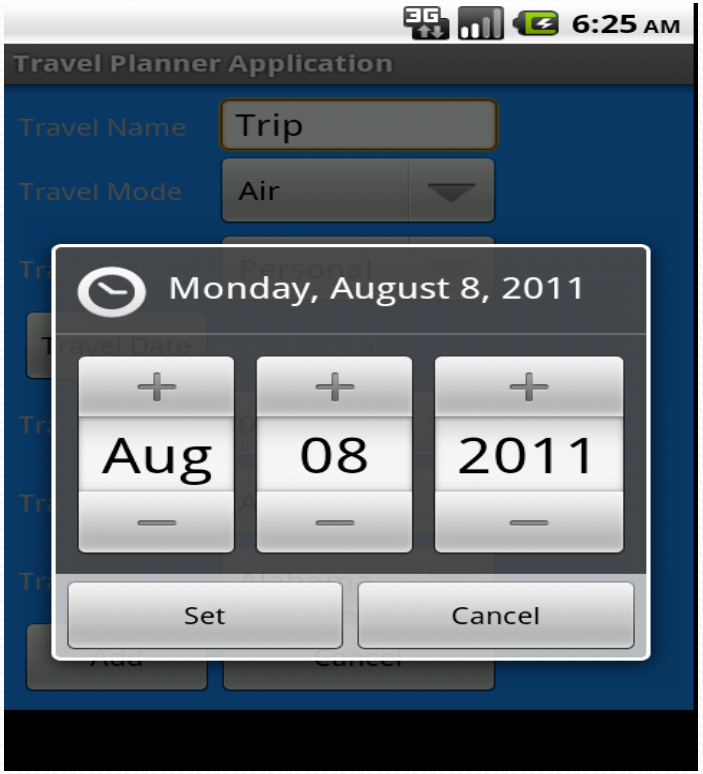


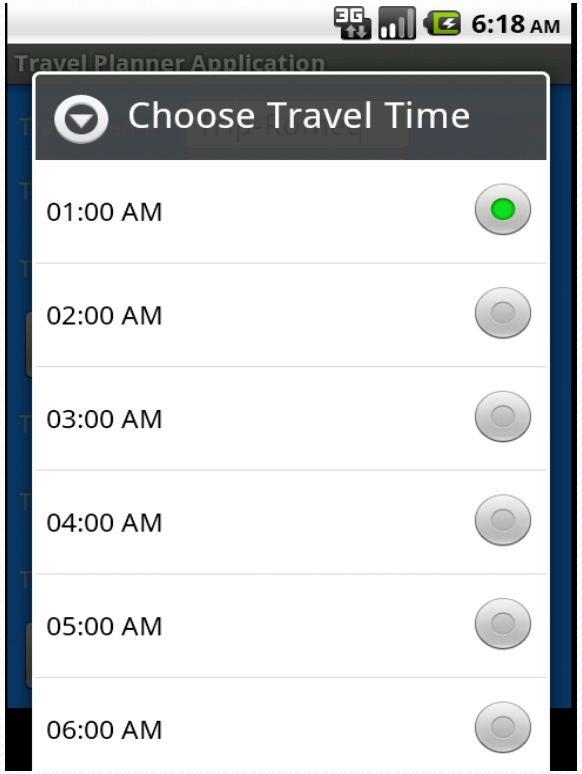
Travel Mode Spinner



Travel Type Spinner

Rich UI Feature





Travel Date Selection

Selection for time

To From Location
